Sclerotinia head rot

Sclerotinia stalk rot

Field score, Oct. 2009,

Searching for Sclerotinia stalk rot resistance from wild annual species

- ◆ Wild sunflower and the sunflower crop are native to North America
- ◆ There are 51 species of wild *Helianthus* - 14 annual and 37 perennial
- ◆ Wild annual species are a valuable sources of resistance genes
- ◆ Easy to cross to the cultivated sunflower (all diploid)
- ◆ Genetic recombination in the progenies could be achieved through homologous pairing

Identifying Sclerotinia stalk rot resistances from wild annual species

- ◆ A total of 460 accessions from 14 wild annual species were evaluated for their reaction to Sclerotinia stalk rot in 2007, 2008, and 2009 in the greenhouse and field
- ◆ Eighty-five plants selected from 21 resistant accessions were saved and shipped from Ames to Fargo for greenhouse crossing

Table 1. F_1 hybrids, BC_1 and BC_2 progenies from the crosses of HA 89 with selected stalk rot resistant plants from *H. argophyllus*, *H. debilis*, *H. praecox*, and *H. petiolaris*

Crosses	No. accession	F_1		Seed set		BC_1	BC_2
		Total florets pollinated	No. seed	(%)	No. seed	No. seed	No. seed
NMS HA89 \times <i>H. argophyllus</i>	4	6,556	316	0.00-40.24	211	>200	
NMS HA89 \times <i>H. debilis</i>	6	6,986	81	0.17-2.40	161	>200	
NMS HA89 \times <i>H. praecox</i>	5	8,516	629	1.22-13.83	109	>200	
NMS HA89 \times <i>H. petiolaris</i>	6	13,519	670	0.13-13.53	102	>200	

Sclerotinia stalk rot screen in F₁ and BC₁

Experiment 1 (F₁ hybrids, Feb. 2010):

- a. 80 g dry mycelium-bearing millet seed
- b. Soil temp. 22-24°C in greenhouse

Inoculation tray filled with
mycelium-bearing millet seed

Susceptible check Car270 shows
disease symptom seven days
after inoculation

**(NMSHA 89 X *H.
praecox*) F₁**

**Susceptible
check Car270**

**(NMSHA 89 X *H.
petiolaris* ssp. *fallax*) F₁**

**Susceptible
check Car270**

Comparison of susceptible check Car270 with F₁ hybrids 18 days after inoculation.
96% of Car270 plants died, whereas most F₁ plants survived well

Table 2. The measurements of the reaction of F₁ plants and their parent to Sclerotinia stalk rot infection at 7, 11, 14, and 18 days after inoculation

Materials	No. plant tested	Stalk rot incidence (%)			
		7 d	11 d	14 d	18 d
HA441 (R-check)	48	4	6	16	16

(NMS HA89 x <i>H. praecox</i> ssp. <i>hirtus</i> PI 435855) F ₁	36	0	0	0	0

Stalk rot incidence: the percentage of dead plants

Experiment 2 (BC₁ progenies, Aug. 2010):

- a. 150 g mycelium-bearing millet seed
- b. Soil temp. 20-22°C in growth chamber

150 g mycelium-bearing
millet seed per tray

Mycelia growth after three
days incubated at 22°C

All roots are in direct
contact with inoculum

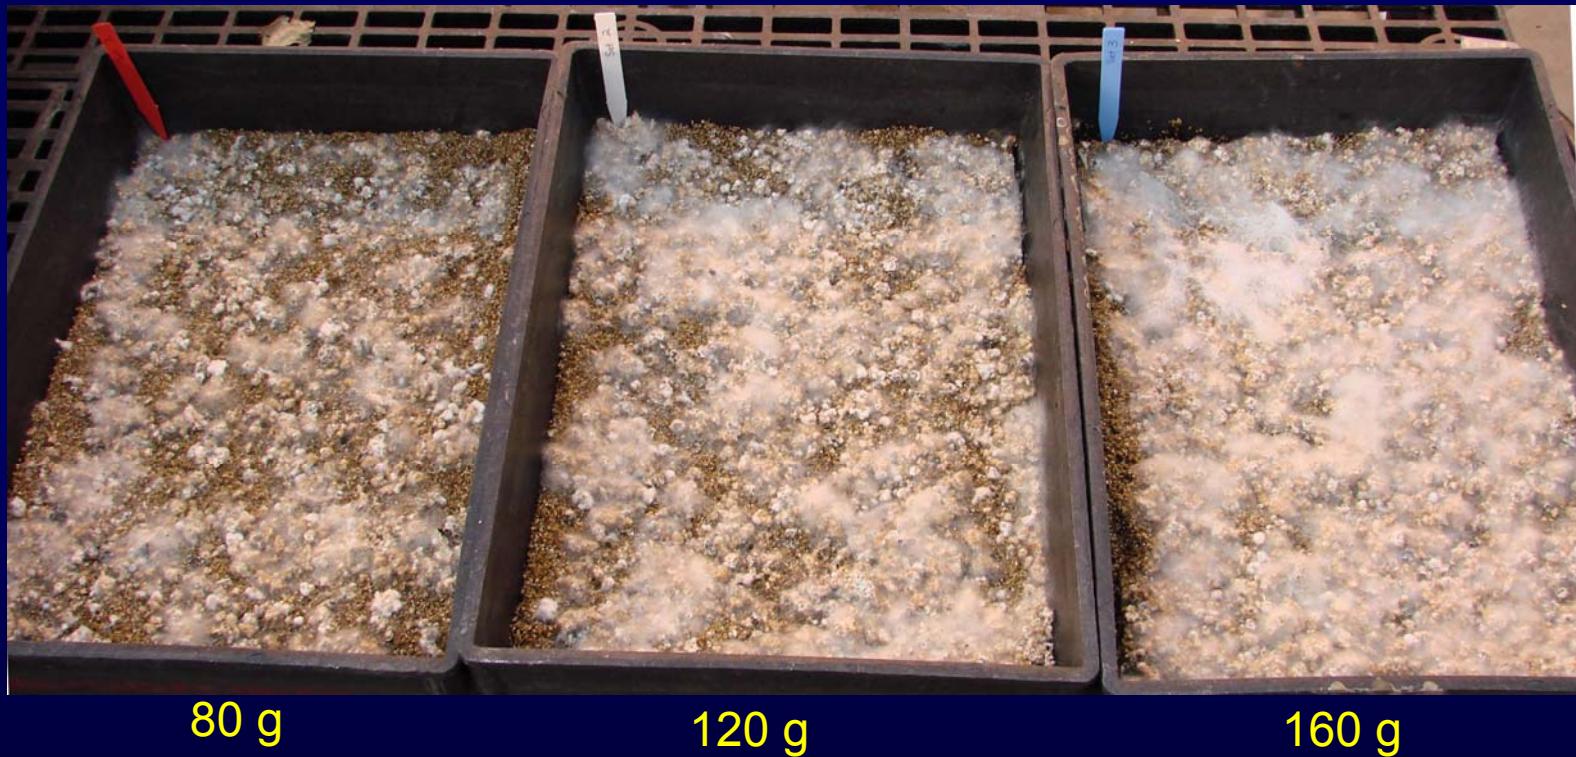

Table 3. The measurements of the reaction of BC₁ plants and their parent to Sclerotinia stalk rot infection at 7, 10, and 14 days after inoculation

Materials	No. plant	Stalk rot incidence (%)		
		7 d	10 d	14 d

Optimize greenhouse method

Experiment 3 (six selected inbred lines, Oct.-Nov. 2010):

- a. Three sets of 80 g, 120 g and 160 g mycelium-bearing millet seed
- b. Two replicates with randomized complete block design
- c. Soil temp. 22-24°C in greenhouse

Seedling age of three and one-half weeks

160 g mycelium-bearing millet seed
14 d after inoculation

Table 4. The measurements of the reaction of inbred lines to Sclerotinia stalk rot infection at 14 and 18 days after inoculation

Materials	No. plant	Stalk rot incidence (%)					
		80 g millet		120 g millet		160 g millet	
		14 d	18 d	14 d	18 d	14 d	18 d
HA 441 (R)	16	0	0	6.3	6.3	50.0	56.3
RHA 280	16	0	0	0	12.5	6.3	25.0
RHA 801	16	12.5	18.8	18.8	18.8	6.3	6.3
HA 458 (S)	16	12.5	25.0	62.5	87.5	62.5	75.0
RHA 439 (S)	16	25.5	62.5	62.5	75.0	87.5	87.5
HA 89 (S)	16	62.5	75.0	56.3	75.0	75.0	81.3

Correlation between susceptibility assessed in the field and with the greenhouse method

Experiment 4 (selected RIL lines, Nov.-Dec. 2010):

- a. 120 g mycelium-bearing millet seed
- b. Two replicates with randomized complete block design
- c. Soil temp. 20-23°C in greenhouse

Four recombinant inbred lines (RILs), RIL243, RIL253, RIL262, and RIL293, were selected from the cross RHA280 x RHA801 for stalk rot resistance

Another four RILs, 8-11-1, 9-10-1, 12-17-1 and 15-16-1, were selected from the cross HA441 x RHA439 for head rot resistance

120 g mycelium-bearing millet seed
18 d after inoculation

RIL253

HA 89

RIL 243

9-10-1

Table 5. Correlation between susceptibility assessed in the field and with the greenhouse method

Materials	2009			2010	
	Carrington	Crookston	Average	Carrington	GH
HA 89	21.0 (10)	-	21.0 (10)	9.3 (17)	75.0 (2)
RAH280	16.7 (2)	7.7 (1)	12.2 (3)	0 (2)	41.7 (2)
RHA801	7.7 (2)	2.8 (2)	5.3 (4)	0 (2)	54.2 (2)
RIL243	0.0 (4)	6.7 (4)	3.4 (8)	1.3 (4)	8.3 (2)
RIL253	0.0 (4)	3.7 (4)	1.9 (8)	0 (4)	8.7 (2)
RIL264	1.5 (4)	2.1 (4)	1.8 (8)	0 (4)	0.0 (2)
RIL293	9.8 (4)	17.5 (4)	13.7 (4)	8.9 (4)	50.0 (2)
RHA439	-	-	-	2.7 (2)	72.3 (2)
HA441	-	-	-	2.4 (2)	37.5 (2)
8-11-1	-	-	-	6.3 (4)	62.5 (2)
9-10-1	-	-	-	0 (4)	20.9 (2)
12-17-1	-	-	-	1.4 (4)	47.8 (2)
15-16-1	-	-	-	0 (4)	37.5 (2)

The number in parentheses represents the number of replicates

Future plan

1. Screen BC₂F₁ and BC₂F₂ populations for stalk rot resistance in the greenhouse
2. Screen advanced generations in the field to validate the greenhouse results
3. Investigate inheritance of Sclerotinia resistance in introgressed lines
4. Develop an advanced backcross population for QTL mapping of stalk rot resistance genes from *H. argophyllus*
